HTML & CSS

This web template is written in HTML 5 and has a fixed layout with one and two columns. The structure which we made is very simple.

Wrapper (the wrapper holds header and content)
> Header
> Content

Footer

For every element we choose proper name which associating his function and is very easy to find in CSS file.

Top Navigation

Search in the Menu

Menu Categories

Front Slider

Meals Slider

Footer Navigation

Example: let's take the top navigation. In CSS its name is TOP-NAV and everything which is in TOP-NAV is styled only for TOP-NAV

```
.top-nav  {
 float: left;
 width: 100%;
 height: 45px;
}

.top-nav nav ul {
 float: left;
 margin: 15px 0 0 257px;
}
```

Java Script

We are using jQuery Library. In every page there is some element which is using some JavaScript function.

All JavaScript files are situated in folder "JS". All libraries which we are using are situated in /js/libs/ and our custom code is in /js/script.js

Script.js is well commented and it will be easy to find which code for which element it is.

Here you can see which elements are using JavaScript.

PSD files

I have included 7 PSDs with this theme. The HTML template is the same as the PSD. That makes very easy to change everything what you would like to.

Files

CSS > /css/
HTML > /
JavaScript > /js/
PSDs > /psd/

Please note: Slider images, sidebar images and post images used in the preview are not included in the download.
